#### RESULT 1 Synthetic. 22-APR-1997; 20-APR-1998; 29-OCT-1998. WO9847919-A1 p53; mdm2; inhibitor; therapy; activator; treatment; cancer; medicament. p53 homologue TIP peptide 22-FEB-1999 AAW82321; AAW82321 standard; peptide; 19 (first entry) 97GB-00008089 98WO-GB001140 A

New substance with a mdm2 binding domain and coupling partner - useful for stabilising in cells without an efficient mdm2-mediated degradation pathway.

WPI; 1998-609975/51.

Lane DP;

(UYDU-) UNIV DUNDEE.

Disclosure; Fig 1; 52pp; English.

This sequence is a peptide homologue of a region of p53 which binds to mdm2. This peptide is used in the construction of a novel agent capable of disrupting the binding of p53 and mdm2 or inhibiting the production of mdm2 in a population of cells. This agent is also used in the preparation of a therapeutic for activating p53, where the population of cells do not overexpress mdm2. Inhibiting mdm2 production and/or inhibiting the binding of mdm2 to p53 allows levely p53 to increase by reducing the clearance of p53 by mdm2, and can be used to activate p53 function. The agents for use in therapeutics for activating p53 can be used for the treatment of cancer, viral conditions or other conditions associated with non-functional p53

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                 This sequence is a peptide homologue of a region of p53 which binds to mdm2. This peptide is used in the construction of a novel agent capable of disrupting the binding of p53 and mdm2 or inhibiting the production of mdm2 in a population of cells. This agent is also used in the preparation of a therapeutic for activating p53, where the population of cells do not overexpress mdm2. Inhibiting mdm2 production and/or inhibiting the binding of mdm2 to p53 allows levels of p53 to increase by reducing the clearance of p53 by mdm2, and can be used to activate p53 function. The agents for use in therapeutics for activating p53 can be used for the treatment of cancer, viral conditions or other conditions associated with

The invention provides peptide derivatives capable of binding to the human MDM2. These peptides can specifically inhibit or block the binding of MDM2. These peptides can specifically inhibit or block the binding of MDM2 to the human p53 protein, in vitro or in vivo. Inhibiting the interaction between the p53 and MDM2 can induce growth arrest or apoptosis in tumour cells comprising a wild-type p53 and non-elevated levels of MDM2. The peptides may be used to identify molecules that bind to to MDM2 and to identify and design inhibitors of MDM2/p53 binding. They may also be used to purify binding partners especially MDM2, diagnose disease by measuring levels of MDM2 in blood of cancer and leukaemia patients and for treatment or prevention of disease involving p53/MDM2 interactions, especially tumours and viral infections. The peptides can be administered masally, rectally, orally or by injection. By interfering with MDM2/p53 interaction, the peptides can activate p53 function and colls. The peptides an activate p53 function and solution in normal cells. The peptides which mimic the MDM2 binding site in p53, have a significantly greater blocking activity compared with
                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                               This peptide fragment of p53 is an inhibitor of the interaction between a C p53 protein and a retinoblastoma (RB) protein. This peptide corresponds to residues 11-29 of human p53 (AAM47079). The interaction between p53 c and Rb is found to be critical for determining whether or not a cell centers apoptosis. Apoptosis is prevented if interaction occurs. The interaction is between regions 1-71 or 290-393 of p53 and region 379-928 of Rb. The invention provides methods to identify compounds able to comprises combining p53 and Rb, or their fragments, with a test compound and detecting interaction/binding between p53 and Rb protein. The method compounds are used in human or veterinary medicine to modulate p53 activity and processes, specifically for inducing apoptosis in tumour cells (possibly also in cells infected by virus), in vivo or in vitro. Expression of these modulators by gene therapy methods is also contemplated. Other activities that can be affected are transcription repression, G1 arrest, DNA repair, homologous recombination and 3'-5'-
                                                                                                                                                                                                                                                                                                                                                  Matches

Novel polypeptide that inhibits degradation of endogenous mammalian cell, useful for treating cancer, e.g. cervical tumor such as sarcoma or carcinoma.
                                                                                                                                                                                                                                                                      carcinoma; squamous cell carcinoma; lung cancer; pancreatic cleukaemia; lymphoma; neuroblastoma; sarcoma; osteosarcoma; glcolon carcinoma; melanoma; choriocarcinoma; breast carcinoma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a peptide for use in modulating the binding of a p53 polypeptide to a p300 polypeptide. The new peptide is useful in modulating the binding of a p53 polypeptide to a p300 polypeptide. The peptide may be used to regulate the mammalian cell cycle or to induce or prevent cell death, for the treatment of cancer or ischaemia. The invention is useful in gene therapy. The present sequence is a peptide used in modulating the binding of p53 to p300
                                                                                                                                                                                                                                                                                                 Human; p53; degradation; cervical cancer; tumour; ovarian cancer; glioma; carcinoma; squamous cell carcinoma; lung cancer; pancreatic cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New peptide for modulating the binding of p53 polypeptide to p300 polypeptide, useful for regulating the mammalian cell cycle for the treatment of cancer or ischemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Hupp

The cell comprises an Mdm2 amplification or overexpresses Mdm2. A degradation resistant p53 polypeptide is useful for inhibiting tumour growth, where the tumour is a cervical cancer and concer and control of the metaling cancer. This sequence represents a region of the human p53 polypeptide which does not form part of an inhibitory peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a substantially pure polypeptide that inhibits degradation of endogenous p53 in a mammalian cell. The polypeptide or a synthetic polypeptide comprising a region of the pure polypeptide is useful for inhibiting degradation of endogenous p53 in a mammalian cell, e.g. in cervical cancer cells or tumour cells selected from sarcoma,
at least a first target molecule in a sample, comprising: sever. moderate affinity binding elements distributed on a surface of, operatively coupled to a support, where concomitant binding of target molecule to two or more of the binding elements results
                                                                                                                                                                                                                                                                          Composition useful for assessing presence of first target molecule such as polypeptide in sample e.g., blood, comprises several low-to-moderate affinity binding elements distributed on surface of, and operatively
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        medical diagnostic device; research; medicine; mil diagnostic; biological pathway; protein detection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mixed element capture agent study associated peptide Gal80bp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  04-NOV-2004 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC determining the presence of a target molecule, which is a modified cc protein in a sample. The binding elements of (I) are useful: in the CC construction of medical diagnostic devices; research; medicine; military; CC forensics, diagnostic application, detecting presence or absence of cc multiple biological markers in complex samples such as blood or urine; CC and detecting components of a biological pathway. The binding elements of CC (I) interact with the target molecule with high affinity and specificity. CC (I) enables detection of substances from a variety of samples in a rapid high throughput format. The binding elements of (I) are easily produced in large quantities with efficient quality control and can be easily tailored to allow attachment to surfaces. (I) provides an easy, CC reproducible and cost-effective method of screening, detecting and CC characterising various components from a variety of samples. The binding elements are suitable in high throughput, robust CC technology that makes it suitable in military, medical and research CC technology that makes it suitable in military, medical and research contents. This is the amino acid sequence of a peptide used in a mixed component capture agent study associated with the composition of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Best Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       affinity interaction with the first target molecule; or chimeric binding elements distributed on a surface of, and operatively coupled to a support, where concomitant binding of the first target molecule to two or more of the chimeric binding elements results in a high affinity interaction with the first target molecule. (I) is useful for assessing the presence of at least a first target molecule such as polypeptide which is modified in a sample e.g. blood or urine. (I) is useful for
                                                                New peptide for modulating the binding of p53 polypeptide to p300 polypeptide, useful for regulating the mammalian cell cycle for the treatment of cancer or ischemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         p53 polypeptide; p300 polypeptide; cell cycle; cell death; gene therapy; cancer; ischaemia; cytostatic; vasotropic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 19
                                                                                                                                                                                                                                                                                                                                                                                                                   13-FEB-2001; 2001GB-00003508

This invention relates to a novel stabilized alpha-helix peptide structure which comprises a selected number of any combination of natural and unnatural amino acids (where the peptide further comprises at least one cross-linking moiety that stabilizes the peptide in alpha-helix conformation). The invention may be useful for the development of compounds with a cytostatic or virucide activity acting as a cell proliferation inhibitor, viral replication inhibitor, gene expression or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a peptide for use in modulating the binding of a p53 polypeptide to a p300 polypeptide. The new peptide is useful in modulating the binding of a p53 polypeptide to a p300 polypeptide. The peptide may be used to regulate the mammalian cell cycle or to induce or prevent cell death, for the treatment of cancer or ischaemia. The invention is useful in gene therapy. The present sequence is BOX-1 domain
                                                                                                                            New stabilized alpha-helix peptide structure useful in medicinal chemistry as therapeutic agents comprises selected number of any combination of natural and unnatural amino acids, where the peptide further comprises cross-linking moieties.

The stabilized alpha-helix peptide structure generates stabilized-helical structures, as well as other secondary structures, to enable the investigation of complex structure-function relationships in proteins and enable the development of new therapeutics incorporating specific stabilized secondary structure motifs. The peptides can be synthesized one-at-a time, using a traditional peptide to generate the structure motif, and may control (promote or inhibit) cell functions. The present sequence is that of a peptide which was used during the exemplification of the novel stabilized alpha-helix peptide structures of the invention.
                                      This synthetic peptide corresponds to amino acids 13-27 of human p53. It was used to raise anti-peptide p53.1 and anti-RB18A antibodies in rabbit. RB18A (see AAY06309) is a novel p53 regulatory protein of the invention. The antibodies were used in immunoscreenings that led to the isolation of a CDNA clone (see AAX59124) encoding human RB18A. The invention provides methods and compositions for the diagnostic and therapeutic applications of RB18A, in particular for the diagnosis, prevention or treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RB18A; p53 regulatory protein; apoptosis; neoplasia; inflanwound healing; graft rejection; reperfusion injury; myocardial infarction; stroke; traumatic brain injury; neurodegenerative disease; ischaemia; toxaemia; infection; hepatitis; breast cancer; ovarian cancer; colon cancer; di

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC analyte (e.g. a protein and/or nucleic acid from a sample or aqueous and/or organic solvent) which comprises the precipitation of the combined by a protein and/or mucleic acid from a sample or aqueous combined by a plution of the precipitated biological analyte off the precipitation media or device. The method is referred to as the solid phase compression (spp) method is referred to as the solid phase compound libraries which are the purification of combinatorially-companies. It is also useful in sample preparation and companies. It is also useful in sample preparation and companies of the ether precipitation overcomes the campyrical preparative and process chromatography with monitoring by an companity of the ether precipitation method, such as handling of cambable ether and corrosive trifluoroacetic acid solutions, and the componition and manipulation of milligram amounts of precipitate. The method cambable automated without difficulty and provides convenience for multiple cample handling. The sequence presented is an example of a SPPE peptidyl-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

(I) comprises: (a) a CC detection domain; (b) a first localisation domain, and (c) a binding CC domain for the molecule of interest. The detection domain, the first CC constituting the recombinant fusion protein for the molecule of interest constituting the recombinant fusion protein for detecting binding of a molecule of interest are operably linked. The binding domain for the molecule of interest is separated from the first localisation domain by 0 cmolecule of interest is separated from the first localisation domain by 0 cmolecule of interest both do not occur in a single non-recombinant protein with the same spacing as in the recombinant fusion protein for detecting binding of a molecule of interest. Also described:

(1) a recombinant expression vector comprising the nucleic acid control sequences operably linked to the recombinant nucleic acid control sequences operably linked to the recombinant nucleic acid control sequences operably linked to the recombinant nucleic acid control capression vector; (4) a kit for detecting binding of the molecule of interest. The recombinant fusion protein is cuseful for detecting binding of a molecule of interest. The recombinant fusion protein is binding of the molecule of interest. The recombinant fusion protein is not feature in the molecule of the molecule of interest. The recombinant fusion protein is not feature in the molecule of the molecule of interest. The recombinant fusion protein is not feature in the molecule of interest. The recombinant fusion protein sand enables the monitoring of biochemical events in live, infact or retain sand enables the monitoring of biochemical events in live, infact
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

The present sequence is that of a peptide (PNC27) comprising amino acid residues 12-26 of human p53. The invention provides peptides corresponding to all or a portion ADG78884 ADG78885 of this sequence, the peptides being lethal to malignant or transformed cells when fused to a membrane-penetrating leader sequence. The peptides are thus useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; p53; cytostatic.
                                                                                                                                                                                                                            Claim 2; SEQ ID NO 1; 32pp; English.
                                                                                                                                                                                                                                                                                                                                                New peptides useful

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      អន្តិន្ត្រន្ត្រង្គ
     The present invention relates to peptides that are selectively lethal to malignant and transformed mammalian cells when fused to a membrane-penetrating leader sequence. The peptides are derived from the human p53 protein. Also disclosed are (i) a pharmaceutical composition comprising a tleast one of the peptides or its analogues or derivatives admixed with a pharmaceutical carrier, and (ii) a method of selectively killing malignant or neoplastic cells in a subject. The leader sequence is preferably located at the carboxy terminal end of the peptide, its analogue or derivative. The leader sequence comprises predominantly positively charged amino acid residues. The leader sequence is at least one of penetratin, Arg8, TAY of HIVI, D-TAY, R-TAY, SV40-NLS, COM CAG, P22N, Lambda N, Delta N, yeast PRP6, human U2AF, human C-FOS, human C-JUN, yeast GCN4 or p-vec. Selectively killing malignant or neoplastic cells in a subject on membrane-penetrating teader sequence is fused to the the peptide, where a membrane-penetrating teader sequence is fused to the carboxy terminal of the peptide, its analogue or derivative. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match
                                                                                                                                                                                                                                                                                                                                New peptide fused to membrane-penetrating leader sequence and selectively lethal to malignant or transformed cells, useful ineoplastic or malignant cells, e.g. cancer cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               05-APR-2000; 2000US-0195102P

                                                                                                                                                                                                                                                                                        The present invention describes the pancreatic carcinoma-specific antigen 3C4-Ag in substantially purified form, which has a molecular weight of 4.5 kDa as determined by SDS-PAGE, and a pI on isoelectrofocusing of 4.5 -5.0. The antigen is unglycosylated or minimally glycosylated and is primarily localised on the surface of rat and human pancreatic cancer cells but is not detected in normal, non-proliferating cells. Also described: (1) a soluble pancreatic carcinoma-specific antigen 3C4-Ag having a molecular weight of 36-38 kDa as determined by SDS-PAGE which is isolatable from sera and other bodily fluids of pancreatic cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New pancreatic carcinoma-specific antigen 3C4-Ag primarily localized the surface of rat and human pancreatic cancer cells, but not detecte normal, non-proliferating cells, useful in diagnosis and treatment of

The pancreatic carcinoma-specific antigen 3C4-Ag has cytostatic activity, and can be used as an immunotoxin. The antigen and methods are useful for detecting and treating pancreatic cancer. The present sequence represents a pancreatic cancer associated antigen peptide, which is used in the exemplification of the present

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DB BG

Sequence 622, Application US/10538066

Publication No. US20060094649A1

GENERAL INFORMATION:

APPLICANT: Epimmune Inc.

APPLICANT: Epimmune Inc.

TITLE OF INVENTION: HLA-A1, -A2, -A3, -A24, -B7, and -B44 Tumor Associated Antigen

TITLE OF INVENTION: Peptides and Compositions

FILE REFERENCE: 2060.015PC06

CURRENT APPLICATION NUMBER: US/10/538,066

CURRENT APPLICATION NUMBER: US/10/538,066

CURRENT FILING DATE: 2002-06-09

PRIOR APPLICATION NUMBER: US 60/432,017

NUMBER OF SEQ ID NOS: 767

SOFTWARE: PatentIn version 3.2

SEQ ID NO 622

TYPE: PRT

ORGANISM: Homo sapiens

     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               seq

Sequence 63, Application US/09695437A
Patent No. 6803203
GENERAL INFORMATION:
APPLICANT: Brookhaven Science Associates
APPLICANT: Anderson, Carl W
APPLICANT: Connelly, Margery A
TITLE OF INVENTION: DNA-PK Assay
FILE REFERENCE: BSA 01-02
CURRENT FILING DATE: 2000-10-24
PRIOR APPLICATION NUMBER: US/09/695,437A
PRIOR APPLICATION NUMBER: US/09/695,437A
PRIOR APPLICATION NUMBER: US/09/695,437A
PRIOR APPLICATION NUMBER: US/09/695,437A
